

KEEP THE BUGS OUT

Pest Control System Installed In Your Walls

• Pest control is performed from outside service ports.

- Pest control treatments are applied in the walls where bugs live and hide.
- After the initial service, no one needs to be home when a HomeTeam technician treats your house.

Taexx is not a termite treatment system

Exceptional Service—Your Strongest Defense™

This pest control system is a network of small tubing installed throughout designated walls during new home construction.

When the system is serviced regularly, a virtual barrier is created that helps you keep household insects out of your home.
